Subject: Seriously???

We do not pay the amount of taxes we do here in Malibu to be told to accept 15 years more years of toxic schools. Are you people serious? This needs to be addressed. And dealt with. Today.

The most urgent matter we face today is to find a safe place for our students [on Aug 19th, 2014](#). The district has not yet agreed to portable units for students and Sandra Lyon is out of town for the next two weeks.

Please join Malibu Unites to demand the following from the EPA so that they do not approve leaving PCBs in place for 15 years!:

1. Order SMMUSD to remove students from any potential exposure, until full source testing and remediation has been completed. School starts [on August 19](#). Please ensure that students at MHS and JC have a place to be educated that is free of PCBs. ie: provide portable (pcb-free) classrooms for any rooms that violate 50ppm until which time renovation or full remediation has been completed.
2. Order SMMUSD to immediately test all the caulk/building materials suspected of containing PCBs in all classrooms constructed or renovated pre-1979
3. Order SMMUSD to immediately remove all PCB material in excess of 50ppm that is in violation of TSCA
4. Reject Environ's second PCB plan as wholly inadequate and in violation of TSCA regulation. There is no legal basis for leaving illegal levels of PCBs in place for 15 years. Fines under TSCA should be levied on the district for every day that they have not provided an appropriate plan since their due date of March 30th, 2014.

I support [Malibu Unites' formal letter](#) sent to the EPA to reject Envrion/district's plan to leave PCBs in place for 15 years.

Respectfully,

Melissa Menton

Concerned parent of 1 Juan Cabrillo student.
